StarPoint Screening Relies on Managed Hosting Provider INetU to Eliminate Downtime

INetU met all of StarPoint Screening's requirements of service, reliability, speed, integrity and price

ALLENTOWN, Pa. (Tuesday, March 22, 2011) – Tenant and employee credit report and background screening provider [StarPoint Screening](#) has moved its entire business server infrastructure to [INetU](#) for the online company's managed hosting needs. INetU was selected to eliminate downtime through its service level agreement and fully managed, highly accessible custom hosting platform.

“We were experiencing significant pain points due to the downtime of our previous hosting provider,” said Kelly Gontarski, owner and president of StarPoint Screening. “Every minute we were down resulted in lost revenue for us. After interviewing many companies, INetU met all our requirements of service, reliability, speed, integrity and price.”

To fix StarPoint Screening's chief concern, downtime, INetU now manages all servers that were previously run internally. Frequent downtime is an unacceptable occurrence for an online company and StarPoint Screening chose to alleviate this issue through INetU's service level agreement of 100-percent network uptime and team of system administrators. INetU monitors the server environment 24/7/365 to achieve its goal of eliminating downtime and ensuring StarPoint Screening's website is up and running at all times.

About INetU Managed Hosting
